Reference Statement

Witt IndustrieElektronik is a longtime partner of Deutsche Bahn AG. In our mutual past in numerous projects we got to know Witt as a consistent, dependable, competent and trustworthy partner. The engineers of Witt solved all the tasks required to develop a solution fitting our needs and our vision.

One outstanding example is the Electronic Evaluation of Points and Tracks EEPT, an innovative, state-of-the-art system to detect damages on tracks and points / switches. Together with Deutsche Bahn the Witt engineers developed several versions of this measurement system:

- located in a regular train monitoring the track system the train is passing
- a mobile system to be temporarily attached to a part of the infrastructure as well as
- a stationary system to supervise critical location in the track network.

The Witt products have a proven track record of being reliable, sturdy and withstanding all challenges posed by the often demanding environment in which they were implemented.

Such we can recommend Witt IndustrieElektronik as a partner to develop or customize and implement technologically tasking electronic systems to measure, supervise and control.
