

Witt IndustrieElektronik GmbH  
Weststr. 1  
D-13405 Berlin

## Certificate Confirmation of duly executed work

To whom it may concern,

Herewith the Berliner Verkehrsbetriebe BVG, Division Infrastructure states that BVG and Witt IndustrieElektronik can look back on a successful, long-time cooperation in developing, implementing and operating reliable electronic systems for such diverse projects as

- Earth Short Circuiting Device – establishment of a temporary short-circuiting between two or three earthing systems to remove contact potentials between a train and a platform
- Earth Potential Measuring Device - monitors the potentials of the connected grounds and evaluates the occurring voltages

The systems build by Witt have shown that they are designed to work reliably in the demanding environment of a public transport system. Whether it is the forces of nature like rain, heat or cold or man-made influences like the vibrations of a passing train or even vandalism: The devices have operated – in all cases for years - up to their respective specifications.

With best regards

  
Greipel
