### *Supply bottlenecks - An opportunity for regionalization of suppliers*

In general, the current trade is increasingly in the process of reorientation due to supply bottlenecks and component shortages. We are also taking advantage of this opportunity and adapting our developments and product refreshments to future possibilities.

For this reason, we are now pursuing a new approach in the area of new developments: Instead of developing the device and then searching for the components, we consider which components are not affected by the supply bottlenecks and can be produced locally if necessary, and then create the construction plan with these components. In this way, we not only continue to offer innovative measurement technology, but also strengthen the regional suppliers at the same time.

### *WB-ADC - A functional module for measuring electrical flows*

The functional module "WB-ADC" is used wherever electrical flows are measured and their currents monitored. It determines upper and lower currents, determines the flow directions, takes energy measurements and can store max. current values. All measured values can be digitally transmitted to third party systems.

### *50 years of WITT - 1972 an eventful year*

German premiere of Star Trek - Starship Enterprise, invention of the video game "Pong", development of the programming language C - 1972 was an eventful year with many ups and downs. And it was also the year in which Witt Industrieelektronik was founded by a highly talented team of engineers. In 50 years not only our location and name has changed, but we have grown from a small engineering office to a company with its own manufacturing. We are happy about 50 years of innovative measurement technology and a round company anniversary. Happy Birthday WITT!

### *WITT Solutions GmbH - More than just a manufacturer*

Many of our customers know us as a reliable manufacturer of individual solutions in the DC sector. But what many do not know is that we have a service segment. We advise customers on their projects in the DC sector, develop a project plan with them for the implementation of their ideas and support them with their CE conformity declaration.

### *Last but not least:*

WITT Solutions GmbH starts the new training year with four new trainees in the field of IT specialist, electronics technician. Welcome on board!

### *You will find out in the next newsletter:*

Are you already planning your visit to Innotrans? Then you should plan a visit to our booth - City Cube, booth 220. Why? You will find out in the next newsletter.
